

What the released-moment target supervises at each prefix, and how close the prediction gets

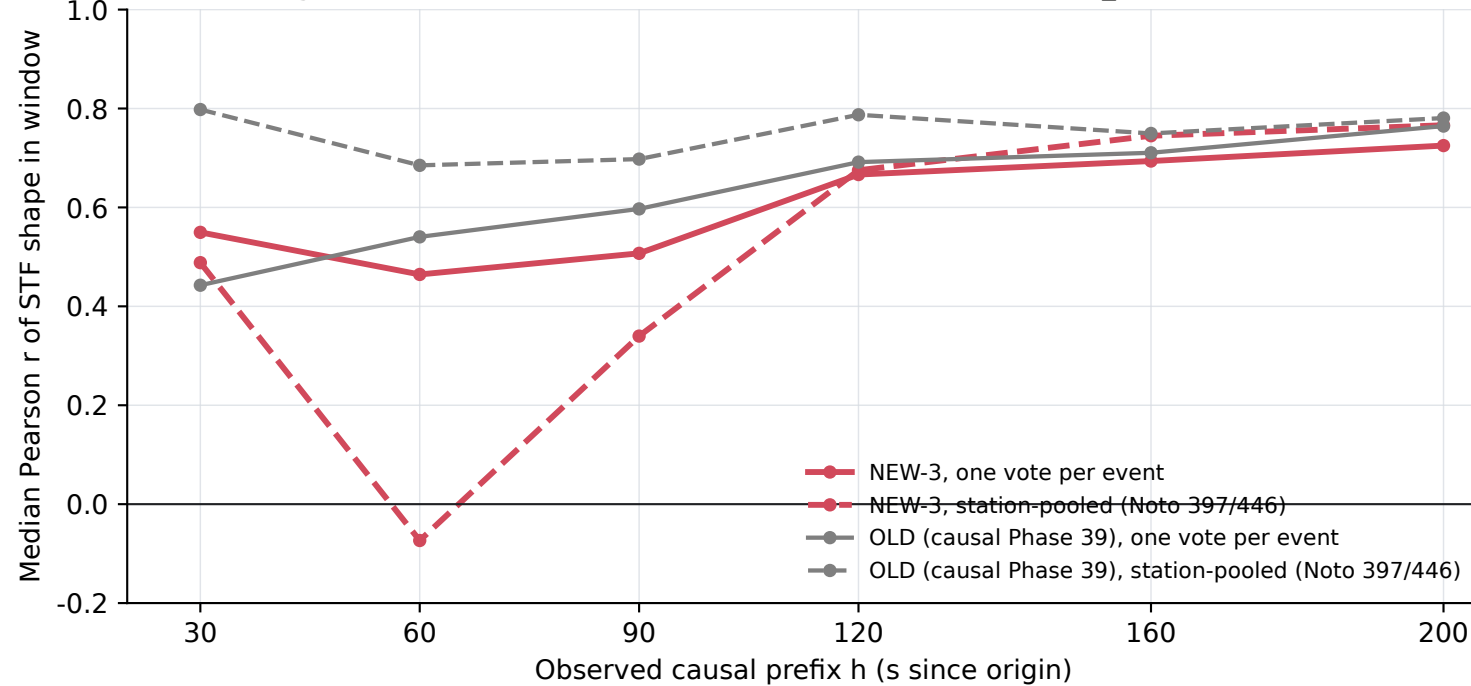

A. Maule2010 CONS: predicted STF at six prefixes vs SCARDEC label (P at 9.9 s)

B. B, A and label B_ref for the same station

C. Shape agreement with the SCARDEC label inside $[0, h - \tau_P]$, validation stations

D. Released Mw vs label inside the same window (solid: event-level MAE)
