

(a) Prefixes $h \in [5, 199]$ s and the 200 s endpoint are trained jointly. Counterfactual moment scaling $a = 10^{1.5\Delta M_w}$, $\Delta M_w \in [-1.0, 0.5]$ rescales waveform, target STF and target moment.

τ_P : station P-wave arrival; $h - \tau_P$: causally observable source window
